Introduction to Estinator Plus

Features

Estinator is a simple application that can help make decisions in a project by making simulations based on the project triangle.

This is done by entering the values you have from your original plans and estimates in calibration mode. Then you can go into simulation mode and experiment. Note how changes to one parameter can be achieved by changing other parameters.

The application exists in two editions: Estinator Basic and Estinator Plus.

Estinator Basic has the following features:

- Installer for Windows
- Entering plans based on estimates
- Registration of start and end date of the project
- Scope registration from 0 % to 100 %
- Registration of resource consumption
- Registration of expected quality measured on resources
- Estimated consumption measured in working days
- Simulation of changes to original plan
- Automatic parameter conversion for changes
- Reset simulation back to start values
- Assistance for finding the optimal balance in the project triangle
- Built-in mini guide

Estinator Plus can be used just like Estinator Basic but has some additional features:

- Work week and holiday calendar instead of a calculated calendar
- Possibility to add a backlog/project plan for easy scoping
- Reporting tool based on simulation

This guide covers only the installation.

For further guidance please refer to user guides downloadable from estinator.com

Prerequisites

Before you install the program check that you have the following:

A Windows pc with a new and updated version of Windows.

The program does not require anything else. There are no needs for access to the internet or other types of networks, but you should be allowed to install programs on this particular pc.

Select and buy app

Go to www.estinator.com and select language if not selected already.

Select Product in the main menu. You can now buy Estinator Plus with free support and updates in 1, 3 or 5 years. Select the number of years you prefer and press 'Buy now' at the bottom.

When you have paid and finished the transaction, you will receive a link to Estinator Plus.

Now you should be able to download a file named EstinatorPlusSetup-vxxx.zip (where xxx indicates the version).

Open the download folder and right click on the file. Extract it and you should see this file in a new folder: EstinatorPlusSetup-vxxx.exe (where xxx indicates the version).

Installation

1. Start the exe file by clicking on it (or use Enter):

 EstinatorPlusSetup-v1.34-20210313-1319.exe

2. If there is a warning from Windows Defender SmartScreen or another antivirus program then chose to trust the program. This warning happens because this is a new app, so when more users start using the app, the warnings should disappear.

It might look like this:

Follow the link ***Flere oplysninger (More information)***. Then a text like this should appear:

Windows protected your pc

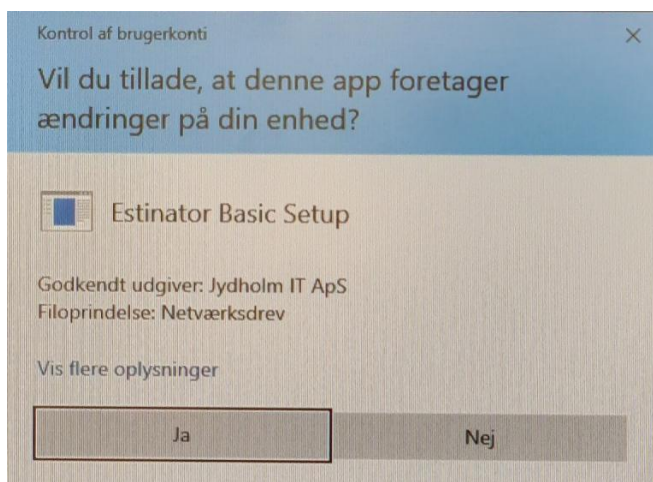

Microsoft Defender SmartScreen prevented a non-approved app from starting. If this app is run, it can affect your pc

Program: EstinatorPlusSetup-v0.34-20210313-1319.exe

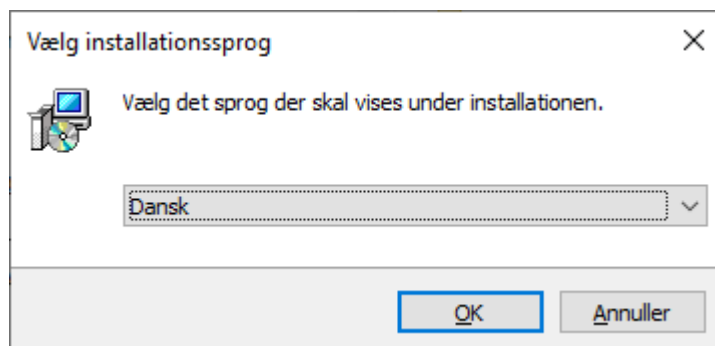

Publisher: Jydholm IT ApS

Now press **Kør alligevel/Run anyway**

3. Windows will probably also warn you. This is normal:

Choose Ja/Yes

Select installation language and follow the instructions.

If you have problems with the installation you are welcome to contact us at support@estinator.com
